Level 1	Level 1	Level 1	Level 1

Phase II Activation of the Heat Contingency Plan

Phase II actions of the California Heat Contingency Plan have been activated as of 07/31/17. These actions are taken as a result of the issuance of a Special Weather Statement by the National Weather Service predicting an Excessive Heat Warning for an Operational Area or power outages during warmer-than-normal weather conditions.

- An Excessive Heat Warning remains in effect for much of Northern California through Thursday evening for continuous triple-digit temperatures.
- In addition to the Excessive Heat Warnings, Heat Advisories are in effect for surrounding areas with high temperatures forecast to be hot in the upper 90s to low 100s.
- Overnight temperature recoveries in the 60s and 70s for much of the Central Valley locations.
- There will be potential for increased fire starts due to the hot temperatures.
- Chance for thunderstorms return to Southern California today and tomorrow and will spread north starting Thursday.
- Cal OES has created a page listing Summer Heat Resources including a map of cooling centers around the state, see link below.
<http://www.caloes.ca.gov/ICESite/Pages/Summer-Heat-Resources.aspx>

Cal OES SOUTHERN REGION

Severe Weather

Monsoonal thunderstorms brought heavy rain, thunder and lightning to multiple counties in Southern Region Tuesday afternoon and evening. This resulted in sporadic power outages, vehicle accidents and trees down.

- NWS issued numerous Flash Flood Watches and Warnings and Severe Thunderstorm Warnings; the warnings have expired, Flash Flood Watches remain in effect.
- Per Cal OES Southern Region Duty Officer (SDO), there have been no requests for State assistance.
- More thunderstorms are expected today, the Region and SDO will continue to monitor.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

VERY HOT Today, near to record breaking heat

High Risk of Significant Fire Potential when thunderstorm activity increases later this week, continues into the weekend

Very strong high pressure over Northern California will hold us in its grip for several days yet. The peak of the heat today will bring 110 to around 115 to the hottest inland areas. Firefighter health is of serious concern in this heatwave -- staying cool will be just as important as good hydration. Thunderstorm activity will be very limited again through Thursday, but can't be ruled out entirely along and near the Cascade/Sierra crest, the same area plus the NW mountains today and then perhaps be most likely over our western mountains tomorrow.

A SE flow with monsoon moisture in it will be across Northern California later today and tomorrow. The weather pattern will change a little Friday as a small trough arrives along the coast and turns the flow more southerly, but that will still bring monsoon moisture northward. The trough will move inland over the weekend but continue to draw moisture into it, so the chance of thunderstorms will continue with nocturnal storms possible. High Risk designation for Significant Fires is in place for a few of the western mountain areas tomorrow, then for more of our mountain areas Friday and Saturday. These conditions may need to be extended into early next week, but there remains a great deal of uncertainty about that, so no High Risk designations have been extended that far out as of yet. Given our fuel conditions, any thunderstorms will favor new starts, possibly create holdovers and support active burning or even rapid fire spread.

The coastal marine layer is thinner but hanging in there with areas of overnight and morning low clouds. Cooler temperatures will be over the region after today, but afternoon highs will remain at least a bit above normal and in the triple digits for our warmer inland areas through early next week. Winds will generally remain light through the end of the week with daily afternoon sea breezes near the coast and some locally gusty afternoon winds in the valleys.

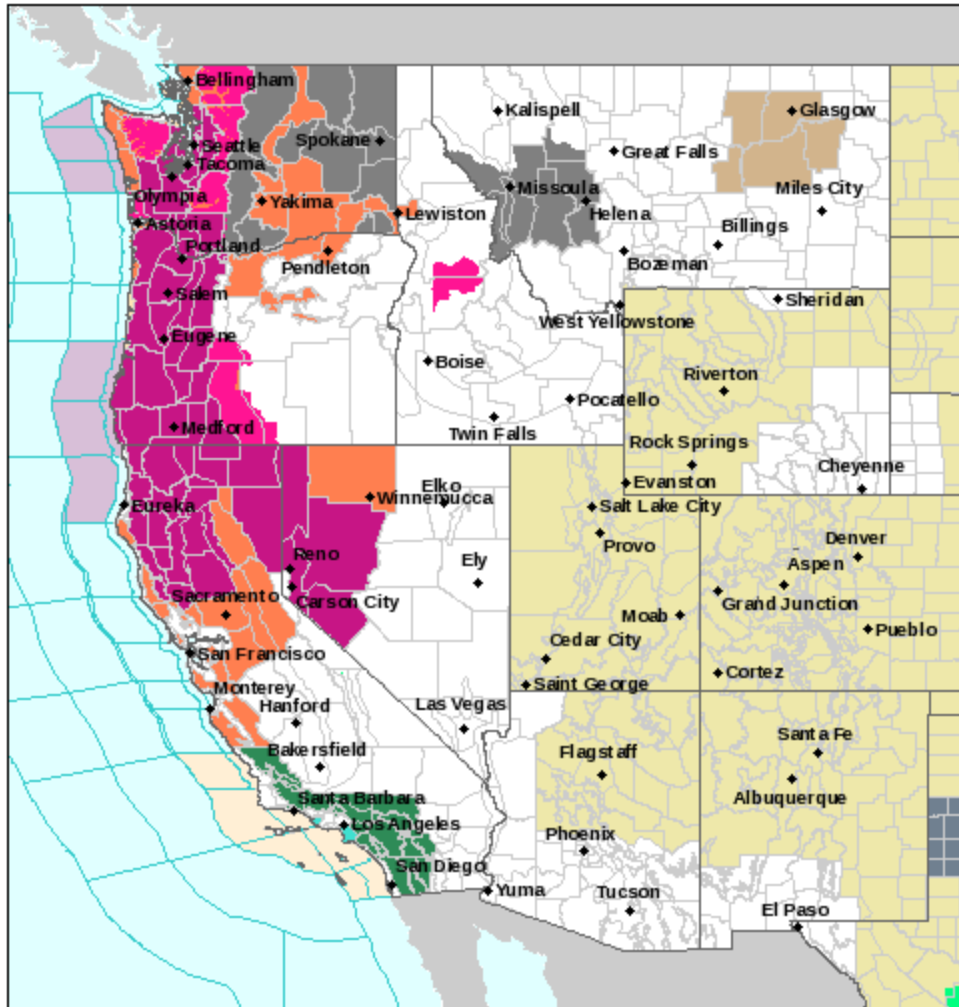

SOUTHERN CALIFORNIA

Scattered showers and wet thunderstorms this week

Well above normal temperatures next several days

Monsoonal moisture will overspread the area during the next few days, leading to scattered showers and wet thunderstorms. Today and tomorrow, the moisture will expand further north and west and nearly the entire forecast area outside the central coast may see some precipitation. Southern CA will likely be a bit cooler today due to cloud cover, but in general, expect highs to remain around 10 degrees above normal. Northwest winds of 10-20 mph will develop in the afternoon along the central coast. In addition, north winds of 10-20 with higher gusts may occur over Santa Barbara County tonight. The moisture will slowly exit the area this weekend, and by Sunday and Monday, only isolated convection is expected in the desert with the rest of the district turning sunny with temperatures remaining in the upper 90s in the valleys and lower foothills
